PRESSURE TEST BENCH

Coad : #PTB-150 / -150

Coad : #PTB-150/-150 is the new pressure test bench launched by us with the advance technology from France. It is driven by air, no need of electric. The independent fast-fill system makes it easy to operate, safe and free pollution. All the components are high-end types, which greatly improves the stability, and reduces the maintenance costs. The testing solution is easy to prepared and can be reused.

**Specification**

► **Technical Data**

Testing flude media	Antirust emulsion
Full range of pressure gage	1600bar
Rated input air compression	7bar
Rated tesing pressure	1200bar
Rated maximum testing pressure	1300bar
Rated minimum testing pressure	200bar
Effective volume	40L

► **Dimensions (LxWxH)**

Machine dimensions	2000*800*1200 mm
Dimensions of testing compartment	1680*800*240mm
Height of testing compartment	250 mm

► **Weight**

kg	185
----	-----

The pressure testing bench control panel is used to manage and monitor the pressure testing process, including setting pressure values, starting tests, and viewing test results.
